DETAILED ACTION

1. The papers filed on 08-04-03 and 12-01-03 have been entered with claims 1-3 pending.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-3 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 of U.S. Patent No. 6,611,467. Although the conflicting claims are not identical, they are not patentably distinct from each other because in the instant claim 1, the limitation "The semiconductor device having a memory" has been added to claim 1 of the U.S. Patent. However, it is known in the art that a semiconductor device can include a memory and peripheral circuitry. Therefore, it would have been obvious to one of ordinary skill in the art to incorporate the memory disclosed in the U.S. Patent in a semiconductor device to simplify fabricating process and to compact the semiconductor device further.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tobita et al. (U.S. Patent 5,523,977) discloses a margin test in a dynamic random access memory.
